

Education

Moxx provides solutions for schools, colleges and other education providers to manage their learning processes better.

By providing a easy-to-use platform for teachers, learners and administrators to conduct courses and manage learning content, our solutions allow teachers to consolidate and reuse study resources, and students to access courses and collaborate with each other effectively.

By eliminating geographic boundaries in learning, our eLearning solutions allows institutions to bring together teachers and learners anywhere in the world – in real time. Not only does eLearning save hours of travel and create global opportunities for course delivery, it enables learning methodologies that are driven by student needs.

Our partnership with dimdim allows teachers to seamlessly integrate webconferencing with any course, and reach a global classroom audience. Using audio, video, whiteboards and application sharing, students and teachers can interact and share ideas.

Moxx works with administrators, teachers and learners in your organization to put together comprehensive learning management solutions. Unlike traditional software integrators, Moxx measures success not at system deployment but on user adoption. We guide your organization around training, content management and support issues to ensure your learning management goals are achieved.

eLearning

Our partnership with dimdim allows you to deploy elearning with full audio and video capabilities and allowing anyone to share desktop, show slides and use whiteboards.

Our learning portal solutions integrate best practices in course delivery along with ease-of-use, and encourage teachers to use rich content in their courses.
